

November 7, 2024

Crystal Springs Water District has completed lead line inventory as required by the Oregon Health Authority for compliance with the US EPA's Lead and Copper Rule Revision.

Crystal Springs Water District is pleased to announce that no lead services were detected in our assessment of Crystal Springs Water District's distribution systems.

The district utilized water system records, county parcel data, and construction documents. In addition to records, we inspected over 400 customer connections and verified they contained no lead at the inspection points. The subset of lines that were inspected is a reliable indicator that the remaining service lines may be assumed non-lead with high level of confidence.
